ABSTRACT

A standard list of books of special excellence or of particular value to the student of geography is provided. The primary purpose of this annotated bibliography is to offer guidance to librarians in achieving reasonably adequate coverage of the geographic literature in undergraduate colleges in the United States, as well as to aid instructors and researchers in the geography field. The list is limited to books and serials. Contents of the volume have been arranged into four principal sections: (1) general works and aids, (2) geographical methods, (3) thematic geography, and (4) regional geography. Within each major section, specific topics are further categorized. Listings are alphabetical by author within the individual categories, including publishers, date, page numbers, price and the library of Congress numbers. (Author/JR)

INTRODUCTION

"A Basic Geographical Library" attempts to provide a standard list of moderate length of the literature on all aspects of a highly diverse subject. These are the books that, according to the best available opinion, are of special excellence or of particular value to the student of geography. As the subtitle indicates, the primary purpose of this endeavor is to offer guidance to librarians in achieving reasonably adequate coverage of the geographic literature in undergraduate colleges in the United States—and in public and special libraries as well. We have tried to offer a selection of works that will reveal to the American college student as effectively as possible the variety, range, richness, and deep fascination of what is both the oldest and youngest of sciences. It is also hoped that this volume—the first such collection of geographic titles—will prove useful to scholars at all levels of attainment, outside as well as within the field of geography, for both instructional and research purposes.

This work was first suggested by the editors at the December, 1963 meeting of the Association of American Geographers' Commission on College Geography (then called the Committee on Geography in Liberal Education), and the idea was accepted by the group as one of the ways in which the geographic profession might contribute significantly to the cause of American liberal education. Subsequently, the editors collected the names of various colleagues generally recognized as having special competence in one or more branches of the field, and these persons were then solicited for suggestions as to what should be listed—and excluded—in their specified areas. All told, more than 400 geographers, including an important minority outside North America, were approached. Their generous cooperation has made this publication possible. The editors regret that our pledge of anonymity, without which a full, frank evaluation of the literature would have been awkward, makes it impossible to acknowledge each of our collaborators. As the editing of the volume proceeded, preliminary sections were circulated among a limited number of critics for further evaluation and refinement. During the final stages of work, the entire manuscript was examined critically by John K. Wright and Chauncy D. Harris, veritably the two deans of American geographic bibliography. The editors hasten to note, however, that the final responsibility for the format of this work and for its contents—and the blame for defects that come to light after publication—is theirs rather than that of any of their collaborators, named or unnamed. It is a pleasant duty to report that this has been a truly cooperative venture for all three editors, with the fullest possible sharing of duties and responsibilities.

It is important for the user of this volume to understand precisely what sorts of materials are included or excluded, and also how they have been arranged and cited. We have limited our choices to books and serials, i.e. discrete, bound publications issued in more or less normal fashion. Thereby excluded are all articles, individual chapters, reprints, fugitive materials, and the like, no matter how meritorious. Similarly, although atlases are considered to be books and are listed herein, individual wallmaps and sheet maps are omitted. Only those items that had been published—at least in part—and were available for inspection by July, 1965 were considered. No 'forthcoming' volume, however tantalizing, has been included.

Since the primary audience for this list is the undergraduate student population, narrowly specialized and highly advanced works have been excluded. And since this audience is an American one, preference has been given to English-language publications and to English translations of foreign-language works. However, it was deemed proper to include important books in other standard scientific languages—French, German, Russian, Spanish, and Italian—where equivalent works in English are not available. A number of basic and indispensable references likely to appear in almost all libraries have been omitted. Specifically, this category includes such items as encyclopedias, dictionaries, almanacs, and a great variety of governmental publications. We should like to emphasize, however, one particular set of works of great value to the geographer that had to be eliminated in order to conserve space, namely national statistical yearbooks and handbooks. A citation for a complete listing of these is given in Item #79.

The great majority of books cited in this list can be described as "technical," in the extended sense of that term. Initially, the editors planned to include a judicious selection of travel books and regional novels, but because of the large element of subjective judgment involved in choosing such items, this idea was abandoned with regret. Only those very few travel accounts that are universally accepted as important contributions to geographic knowledge have been included, and a single novel that should produce little dissent—George R. Stewart's "Storm."

In general, we have tended to select recent works—those still available from publishers or recently out of print. (We have not tried to state what is or is not out-of-print, since such information becomes obsolescent so quickly.) Despite this general policy, a number of older "classics" have been cited, including some that are difficult to find on the used-book market. This has been done in the hope that their reissue might be stimulated thereby and also with the knowledge that modern techniques of duplicating printed materials make it feasible for libraries to procure facsimiles.

The selected books are chiefly those which have been written by or for geographers. Perhaps the most difficult set of editorial decisions had to do with items considered peripheral to the field of geography. Aside from individual works of outstanding merit, the general policy has been to be rather conservative in those sectors enjoying a rich geographic literature and to be relatively liberal where strictly geographic publications are meager in number. This explains, for example, the dominance of non-geographical works in sections entitled "Soils" and "Photogrammetry and Air Photo Interpretation." The same principle of a sliding scale of acceptability has been invoked in trying to approach a quantitative balance among various subject areas. Where the geographical literature is strongly developed, as, for example, in works on the European and Anglo-American areas, we have been compelled to eliminate some titles of considerable merit to avoid overcrowding; by contrast, in the extreme case of Central Africa not a single acceptable work was discovered.

It is hoped that the reader who is dismayed by the relative poverty of certain sections of this list will realize that it is more the fault of the literature than that of the editors. If this volume can ultimately contribute, however indirectly, toward eliminating these "weak spots" in the literature, the labor that went into its compilation will have been well spent. In closing this discussion of eligibility of publications, it might be well to re-emphasize the fact that these are suggestions for a library reference collection and that this volume is not intended as a survey of suitable texts or other materials for classroom use. Those texts that are included are considered to have significant reference value; no judgment is intended concerning the pedagogical value of textbooks that are not cited herein.

The contents of this volume have been arranged into four principal sections: I. General Works and Aids, II. Geographical Methods, III. Thematic Geography; and IV. Regional Geography. Within each major section, specific topics or regions are recognized, and within each of these, in turn, books are arranged alphabetically by author under the following categories, insofar as it is appropriate to do so. Bibliographies; Serials; Atlases, General Works, Works on Special Subjects, and Regional Works. Some books that could be classified logically under two or more topics are crosslisted to their main entries.

For all citations, except those for serials, the following kinds of information, are given, insofar as they are obtainable or applicable:

1. Identifying number
2. Author(s), editor(s), or compiler(s)
3. Title and subtitle
4. Translator and indication of original language
5. Series
6. Edition, when a second or later edition is cited
7. Place of publication

12. Price (if in print)
13. Library of Congress or other catalog number
14. Other important publication details
15. Citation of reissue or paperback edition
16. Brief descriptive annotation

In the case of serials, the following information is given: Title, issuing agency, initial date of publication, frequency of publication, address of publisher, and brief descriptive annotation.

In addition to thanking Frances D. Harris, John K. Wright, and our many anonymous contributors, we should also like to acknowledge with gratitude the able and diligent assistance rendered in a number of clerical and editorial efforts by Mrs. Judith Kusalaus, Mrs. Beth Ack, and Miss Marcia Merry, all of the State College, Pennsylvania community and the many kindnesses extended by the staff of the American Geographical Society of New York.

We shall welcome corrections of errors by users of this volume, and we shall also look forward to receiving any comments or suggestions they may care to offer.

1. GEOGRAPHICAL BIBLIOGRAPHIES

1. AMERICAN GEOGRAPHICAL SOCIETY. Current Geographical Publications, Additions to the Research Catalogue of the American Geographical Society. ed. by Nordis Felland. New York. A.G.S., 1938-- Mimeo. Monthly except July and August.

A comprehensive listing, by subject or region, of recent books and periodical articles with occasional descriptive annotations. Yearly indices.

2. AMERICAN GEOGRAPHICAL SOCIETY. Research Catalogue of the American Geographical Society. Boston. G. K. Hall, 1962. 15 v. (XX, 10436pp) maps, 37 cm \$865 00. LC 63-4923.

Photocopies of the cards in the AGS Research Catalogue 1923 through 1961. The cards are arranged primarily by means of a detailed regional system, then by a particular area, cards are further classified by topic. An invaluable research aid.

3. AMERICAN UNIVERSITIES FIELD STAFF, INC. A Select Bibliography, Asia, Africa, Eastern Europe, Latin America. ed. by Phillips Talbot. New York. American Universities Field Staff, 1960. 534 pp. \$4.75. LC 60-10482.

ALSO Supplements, 1961, 1963. \$1.00.

Although this work is not specifically geographic in coverage, concentrating instead on history, the humanities, and social sciences in general, it is a most useful guide to collateral readings for geographers on the specified areas. Brief descriptive and critical annotations.

4. ASSOCIATION DE GÉOGRAPHE FRANÇAIS. Bibliographie Géographique Internationale. Paris. A. Colin, 1891-1953, Centre National de la Recherche Scientifique, 1954-- 72 v. to date, annual since 1922. LC 25-1167.

This "most convenient, comprehensive, and in many respects the best of all current geographic bibliographies" normally appears annually, with the collaboration of an international group of contributors. It lists books, periodical articles, and maps that were published during the specified year. Brief signed commentaries are usually appended to each entry. The book is divided into various regional and topical sections, with the former dominating.

5. GEOGRAPHISCHES JAHRBUCH. ed. by Herman Haack. Gotha. VEB Hermann Haack Geographisch-Kartographische Anstalt, 1866-1956. 61 v. to date, issued irregularly. LC 62-3398. None issued since 1956.

This most venerable of the major bibliographic series in geography was published by the Gotha firm of Justus Perthes until World War II, and then was revived by the current publisher in 1947. Each volume contains a series of comprehensive essays on the status and progress of study in selected fields in geography, with abundant annotated references to the literature of the preceding several years. This uniquely useful aid is analyzed (through 1945) in Wright and Platt, "Aids to Geographical Research" pp. 52-57, (See #8).

6. ROYAL GEOGRAPHICAL SOCIETY. New Geographical Literature and Maps. 1- (1951-) 2 numbers a year. London. 20 shillings a year.

Classifies by region or systematic branch all articles in 20 of the principal geographical periodicals and selected items from about 150 other geographical periodicals, and all new books, atlases, and current maps received by the Royal Geographical Society.

7. SYRACUSE UNIVERSITY, DEPARTMENT OF GEOGRAPHY. Basic Readings in Geography. 3rd ed. Syracuse: 1960 Mimeo. 61 pp.

"An annotated list of important materials and reference sources recommended especially for the advanced student in geography." Concise and useful.

Although now out of print and somewhat out of date, this volume is still a uniquely useful bibliography of geographic bibliographies and guide to certain other reference works. It contains an important introductory essay as well as brief comments on many of the items

Also: abr. ed. by M. Jean-Brunhes Delamarre and Pierre Deffontaines. tr. from French by Ernest F. Row. London: Harrap, 1952. 256 pp. 25s. LC 52-3612.

Although somewhat dated, this "classic" text still merits attention for its erudition, methodological significance, and vivid writing.
